PHAM DUONG HOA

Senior Fullstack Developer / AI-Driven Workflow Engineer

Ho Chi Minh, VN | 0795990798 | hoakg2000@gmail.com
github.com/hoakg2000 | linkedin.com/in/hoakg2000

Summary

Software engineer with deep expertise in frontend architecture (Next.js, App Router, SSR/ISR) and solid backend REST API design. Specializing in integrating AI-driven workflows, custom system prompts, and automated agent configurations to accelerate development productivity and ensure high-code-quality auditing.

Technical Skills

Frontend Architecture:	TypeScript, Next.js, React, pnpm Monorepo, Storybook, SCSS, Tailwind CSS
Backend & Database:	Node.js, NestJS, Express.js, Java Spring, MySQL (Schema Design, Pure SQL), PostgreSQL, pgvector, Prisma
AI Workflows:	Custom Agent Configurations, Claude Code, Codex CLI, LLM API Integration, MCP, Prompt Engineering
Systems & Real-Time:	WebRTC, WebSockets, RESTful API Design
DevOps & Infra:	Docker, Kubernetes (Operations, Health Check & Logs), Nginx, CI/CD Pipelines

Work Experience

Senior Frontend Developer | FPT Software 05/2026 – Present

- Developed and audited complex UI components and 3rd-party integrations for enterprise web applications, ensuring high scalability and adherence to standards.
- Engineered custom AI-driven workflows and automated skill configurations (`agent.md`, `skills.md`) leveraging Claude Code and Codex CLI with built-in audit loops, reducing coding effort by 80% and cutting overall task effort by 60%.

Frontend Developer | Toyar Inc (FidoVN) 02/2024 – 01/2026

- Architected and delivered the end-to-end frontend for two core e-commerce admin modules comprising 20+ complex CRUD screens, role-based access control (RBAC), and synchronized data flows between internal and customer portals.
- Compressed a standard 4-month development cycle into 1 month to meet critical launch deadlines, successfully deploying both production-grade modules with zero post-release critical bugs.
- Acted as the primary technical bridge between design and backend teams, analyzing UI specifications against API contracts, preemptively resolving technical bottlenecks, and streamlining cross-functional workflows.

Software Developer | TMA Solutions 02/2022 – 12/2023

- Developed microservice backend modules integrating Apache Pulsar and Java Spring, standardizing SDK configurations and message brokering behavior.
- Built a React-based web platform to demonstrate Pub/Sub functionalities, independently driving initial architecture and mentoring incoming engineers.
- Dramatically improved code quality by authoring comprehensive unit tests for both frontend and backend modules to achieve $> 90\%$ code coverage, and systematically resolved over 200+ critical SonarQube audit warnings down to 0.

Projects

AI Personal Assistant | Personal Project NestJS, Prisma, Next.js, React Native, PostgreSQL, pgvector, Gemini

- Architected a multi-platform assistant by engineering a custom wrapper around Gemini models, configuring structured system prompts, instructions, custom tooling, and multi-turn message history.
- Implemented RAG capabilities (using pgvector) with dynamic function calling, enabling the model to autonomously decide when to query vector memory or invoke external tools (Google OAuth, Calendar API, Gmail API).

AirDevice | Cross-Device Peripheral Streaming TypeScript, Node.js, WebRTC, WebSockets, pnpm Monorepo, React

- Designed a multi-client real-time communication system consisting of a central Node.js signaling server, a QR-provisioned PC web client, and a mobile web client.
- Implemented peer-to-peer live video streaming from mobile cameras to the PC client using WebRTC, orchestrated via WebSockets for low-latency session signaling.
- Engineered the PC web client using a modular architecture with a pnpm Monorepo, decoupling core streaming logic into framework-agnostic micro-frontend modules.

Human Manager CRM | Professional Module MySQL, Express.js, React

- Developed a comprehensive HR management system focusing on scalable backend relational database design and robust REST API logic.
- Implemented strict state management and audit logging to track personnel transfers, edit histories, and promotion workflows securely.

Awards & Honors

Outstanding Newcomer Recognition | Toyar Inc (FidoVN) 2024
3rd Prize | Vietnam National Olympiad in Informatics (OLP) 2020
1st Prize | Ho Chi Minh City Open University Informatics Olympiad 2019, 2020

Education

Bachelor's Degree | Ho Chi Minh City Open University 2018 – 2022

Certifications

Claude Certification Architect - Foundation | Anthropic Score: 940 / 1000
EF SET English Certificate | EF Standard English Test C1 Advanced Level
